HARDY HEDGES

PLANTING AND GROWING HEDGES

Beautiful hedges are easily grown if a few simple instructions are observed. Dig a trench 10 to 12 inches deep and the width of a spade. Set the plants a couple of inches deeper than they stood in the nursery. This insures a dense hedge at the base. Privet should be set 10 inches apart, Barberry about 18 inches. Shrubs such as Spirea 18 inches, Chinese Elm 2 feet, and Evergreens 2 to 3 feet. Spacing may be varied depending upon the density desired. After spacing plants, fill in about one-half of the depth of the trench, then flood with water. After settling fill in balance of the trench and tramp firmly. Leave a slight depression along each side of the hedge to retain water. Keep thoroughly soaked until well started. Privet should be cut back to about 8 or 10 inches after planting to promote vigorous growth. Hedges planted in this manner rarely fail to grow.
